## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 to 5, 7 to 13, 15 to 19, 21 to 27, 35 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gletos (5,508,398).

The Gletos reference teaches a method of crystallizing macrolides, note entire reference. A macrolibe starting material is combined with two solvents, one polar and one a hydrocarbon, note, col.3. The hydrocarbon solvent can be toluene and the polar solvent can be ethyl acetate, note col. 4. The ph of the solution is adjusted either with an aqueous acid or base, note examples. This adds the water to the solution. The temperatures of crystallization are 40c or lower. The marcolide is then crystallized

Application/Control Number: 10/815,339

Art Unit: 1722

isolated and recovered. The sole difference between the instant claims and the prior art is the two phases. However, it would have been obvious to one of ordinary skill in the art to have the two phases as one solvent is water immiscible which would inherently and obviously create two phases of the solutions and crystallize form the phase which as the marcolibe.

Claims 6, 20, 29 to 32 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gletos (5,508,398).

The Gletos reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the time and temperatures of mixing. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentations the optimum, operable temperature and times in the Gletos reference in order to ensure full mixing of the contents and increased crystallization rates.

Claims 14, 28 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gletos (5,508,398) in view of Navarro (wo 00/33878).

The Gletos reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the specific marcolides. However, the Navarro reference teaches crystallizing macrolides like ascomycins, note page 3. It would have been obvious to one of ordinary skill in the art to modify the Gletos process by the teachings of the Navarro reference to crystallize a specific marcolide in order to crystal them for use in pharmaceuticals.
